

Early Journal Content on JSTOR, Free to Anyone in the World

This article is one of nearly 500,000 scholarly works digitized and made freely available to everyone in the world by JSTOR.

Known as the Early Journal Content, this set of works include research articles, news, letters, and other writings published in more than 200 of the oldest leading academic journals. The works date from the mid-seventeenth to the early twentieth centuries.

We encourage people to read and share the Early Journal Content openly and to tell others that this resource exists. People may post this content online or redistribute in any way for non-commercial purposes.

JSTOR is a digital library of academic journals, books, and primary source objects. JSTOR helps people discover, use, and build upon a wide range of content through a powerful research and teaching platform, and preserves this content for future generations. JSTOR is part of ITHAKA, a not-for-profit organization that also includes Ithaka S+R and Portico. For more information about JSTOR, please contact support@jstor.org.

that day in "Rubio" was a realization. And now as I look back at it in the dizzy retrospect of years it seems like a beautiful dream. Starting from home "Lomita," in the Calmenga Valley near Los Angeles, I met my friend, a true old nobleman of Nature, clad in his rustic garb and carrying a time-worn market basket. But beneath his rough clothes, donned purposely for the trip, there was one of the keenest and best ornithologists of the west. We took the train, and as we passed the country lying from Los Angeles to Pasadena, the scenery was grand. Lemon orchards, palms, little farms here and there as neatly kept as a front yard of a city dwelling, came and went away before the eyes as we peered out of the car windows.

The City of Los Angeles is truly a city of angels to me. And I believe if an angel would drop down from heaven and view around, he would soon soar to that dainty little city cutely ensconced amid a range of the Sierra Madre in southern California, and say, throwing down his mantle and lowering his wings, "I'm back in heaven. I am back in the City of Angels."

We soon reached our getting-off-place and soon started over the rough country of the foothills. Bevis of Valley Quail greeted us along the pathway. A flock of downy young come skampering down the path but a glimpse of us was enough and sent them scurrying away in the high grass nearby. Anna's and Black-chinned Hummers were common, and as we proceeded up the canon, along a little stream, we found many of their nests with eggs. Phainopeplas and Black-tailed Gnatcatchers were common now, and as I passed a little stream I saw for the first time in life a Pileolated Warbler drop down from its green bower, and pausing, drink from the pebbly shallows of the little stream. We found a Black-tailed Gnatcatcher's nest and one of the Western Flycatcher. The former was in a live up-right, far up; the latter amid ferns and other growth beneath the overhanging face of a bank near the stream. Louisiana Tanagers, Black-headed Grosbeaks, Black Phœbes, several kinds of Warblers and California Thrashers were common. I found a beautiful set of the Desert Sparrow Hawk in a cavity of a live oak. It comprised five eggs, the most beautiful I ever saw for this species; I got nearly eaten up by ants

while up after this set. Mosquitoes are not in it when ants are in comparison.

While we were eating lunch a California Condor soared high up above the canon and gave me my first sight of this bird in life. I don't know, in view of circumstances which seem to condemn it to extinction, that I shall ever see it again.

We ascended the canon to its end and spent one of the happiest days of my life in Rubio. The gentle climate and new surroundings were exhilarating and it causes me a refreshing thought whenever I recall that day with M. in Rubio.

JOHN W. DANIEL, JR., *Lynchburg, Va.*

FIVE ACRES OF BIRDLAND.

We had scarcely set foot within the five acre enclosure of the Ahtanum parsonage before I recognized its possibilities as a haunt for birds and determined to register them in the order of their appearance. The parsonage demesne is pleasantly diversified by the presence of a winding stream and plentiful shade. In fact, this five acre plot contains a little bit of every thing. In it are to be found a wheat field, a lowland meadow of wild grass, two alfalfa meadows, an upland pasture with salt grass, rye grass, and sage, a tule' swamp, a rose brush thicket, abundant willows skirting the stream, a fine lawn sprinkled with box elders, maples and young elms, an orchard of thirty trees or so, and a garden. Besides these there are weedy tangles and brush heaps, such as birds delight in ; overgrown fence corners galore ; and best of all, "The Island," a low lying coppice which the creek almost surrounds and above which towers a numerous company of young balm trees.

On the first of June I set out to see how many birds would visit the enclosure within the year, or a given time. In pursuance of this plan the following rulings were established : On my fence is in my yard, and, Over my yard is in my yard. If the desideratum were very near and apparently in need of encouragement I did not scruple to assist nature by making a retreat into the parsonage lot seem more desirable than my approaching presence ; but further than that I did not pass the
